

MODEL: AV
Pneumatic Actuator

VOCESTER-ARMATUREN GmbH & CO., KG being the largest valve manufacturer in Elmshorn, Germany. We locate in Lieth 52 A, D-25336 Elmshorn, Germany, a renowned hometown of Engineering Company near Hamburg.

The company covers a land of 64,000 square meters. Through years of consistent innovation and development since 1990, VOCESTER prides itself on having robust technical strength, 50 senior engineers, 80 engineers, 110 technicians and 442 well-trained skilled workers. The use of specialized design software like Pro/E and CAD etc, has shortened the R&D and trial manufacture cycle, and greatly improved the service life and dependability of products. Besides, VOCESTER owns over 380 high precision machine tools, physical & chemical lab equipped with atomic spectrograph, reactor, high precision weighting instrument, heating furnace and other laboratory facilities, as well as impact tester for mechanical test, stretcher, UT and MT nondestructive flaw detector, Brinell, Rockwell and Vickers hardness testers, ultrasonic thickness tester, heat treatment furnace, hydraulic tester and hi-tech facilities enable to produce more 500,000 pieces of valves per year. The adoption of ERP international advanced management system makes production activities quite smooth, and 5S to effect high efficiency operation of the company.

VOCESTER has been certified to ISO9001 and pressure vessel AZ. Now it is undertaking API 6D and CE/PED certification & approved by ABS, low fugitive emission test was approved per TA Luft, fire safe tested & certified by Lloyd's register. Manufactured to ANSI, NF, API, JIS, BS, DIN, and other standards, or nonstandard to meet customers' requests, we produce gate valves, ball valves, check, butterfly valves and globe valves, knife gate valves, slurry valves, upward downward expanded dumping valve, Y-type slurry valve, cast iron & steel also stainless steel (CF8, CF8M, CF3, CF3M). DN8~2000 and 1/4"~80", PN10~320 and 150~2500Lb, serviceable temperature -196~+650°C. Widely used in the industries of petroleum, chemical, papermaking, fertilizer, brewing and metallurgy etc. to handle the corrosive and non-corrosive mediums such as acid, alkali, water, steam, seawater, coal gas, natural gas, oil and etc., our products have been greatly recognized by users for their consistent and superior quality. Based upon the philosophy of "established in valve market and stuck to quality commitment", people of VOCESTER, supported by leading technology and management, are dedicated to providing you with better quality and service.

Great Move

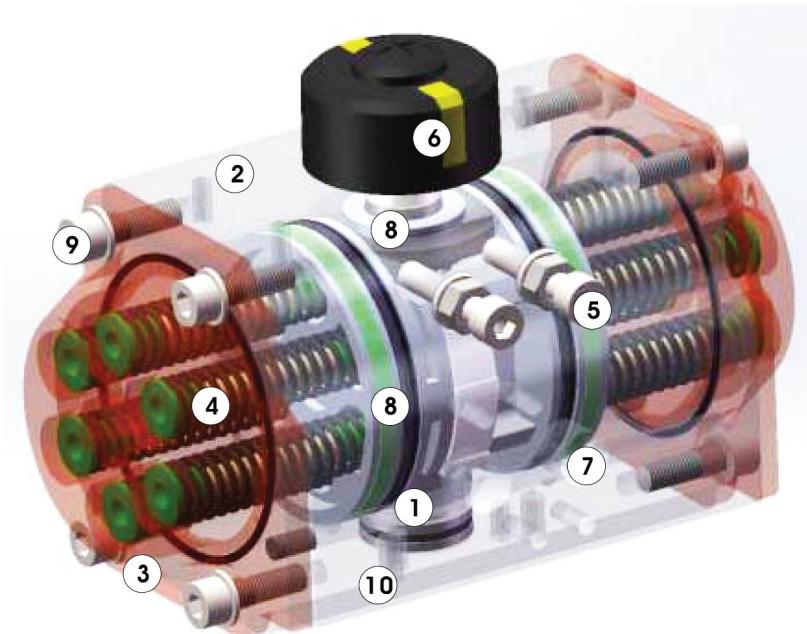

VOCESTER is now proudly to be a part of Clinton Texon Inc, USA, one of the largest investment firms that invest globally across multiple industries.

With this great moving, you can be assure that VOCESTER will be the absolute best solution for every one regards on product, technology and services.

Description And Model Preparation AV

AV Pneumatic Actuator

AV new rack and pinion pneumatic actuator by the VOCESTER combines the latest technology at home and abroad, through the three-dimensional model of innovation and optimization of CAD design, beautiful shape compact, modern styling; and adopt practical new materials, new processes, so that the product quality, more reliable; more standard selection of more affordable; products fully meet the latest international standards, technical specifications, to meet current and future needs.

1. Dual piston rack and pinion design of symmetric structures, rapid and smooth movement, high precision, high output power by a simple change in the direction of the piston assembly positions available anti-rotation.
2. High quality extruded aluminum alloy cylinder block, by precision machining the hole and the external surface of hard anodized (anodic oxidation under special circumstances + Teflon coating), longer life, low friction coefficient.
3. Integrated design, all the double acting and single-function actuator models have the same cylinder and end caps, easily removed by installing a spring or spring to change the mode of action.
4. Combined pre-spring break Hean whole group, whether in the assembly process or use on-site in both convenient and safe to install or change the
5. The external side of the two single independent adjustment screw has been number of springs. installed in the valve for the actuator is precisely to facilitate, control valve open and valve closed position, For the whole trip conditioned office is also configured in two cover a longer adjustment screws.
6. Multi-position indicator, on-site visual instructions, consistent with VDINDE3845, NAMUR standard slot, the output can be installed and all the accessories, such as limit switch box, electric positioner, position sensor (Pepperl and Fuchs, Turck).
7. Gas source interface line NAMUR standard, direct safety plaques NAMUR standard solenoid valve.
8. Rack on the back of the composite bearing and piston guide ring and the output shaft bearings to prevent metal on metal friction and increasing lubrication, so a low friction, long life.
9. All fasteners are stainless steel, long-term corrosion resistance.
10. Connection part of the line with new international standard ISO5211, DIN3337 (F03-F25) makes products with interchangeable, versatile.

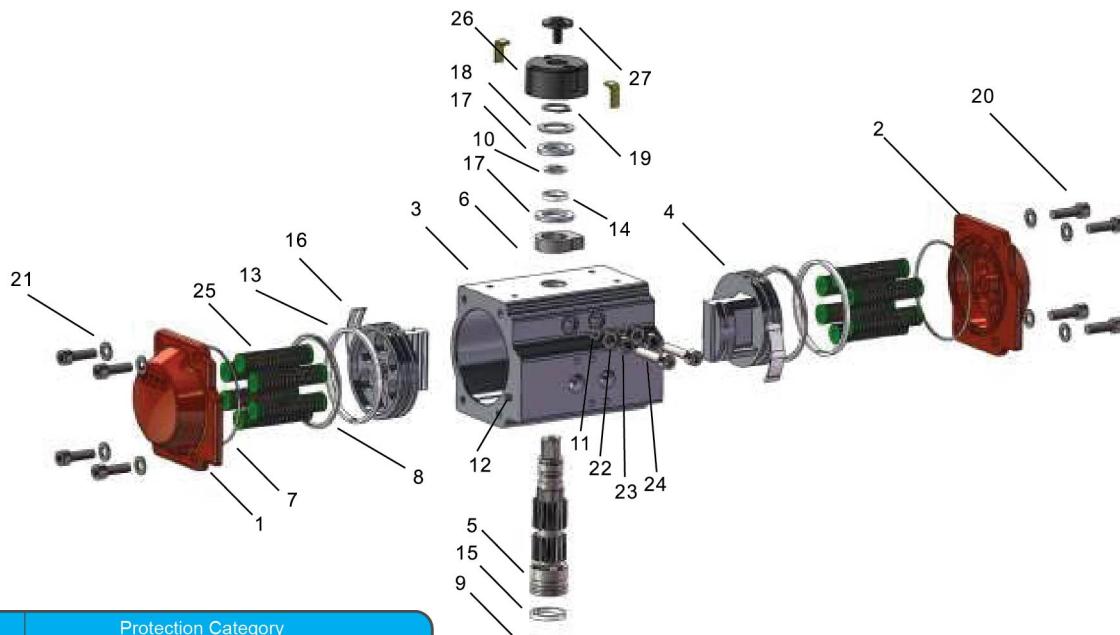

Components and Materials, Corrosion AV

Model Preparation

AV-160 S-K10 F10/12 P27-90-B-A

1. AV Pneumatic Actuator
2. 32~300 Cylinder Size: 32-400
3. Type: D-Double Acting, S-Spring Return
4. Spring QTY: K5/K6/K7/K8/K9/K10/K11/K12/K13/K14/K15/K16, Not Available for Double Acting
5. Connection: ISO5211 Standard, Flange Size, F03-F25, Star Square, 9-55
6. Shaft Size Code: P-Star Square, H-Parallel Opposite Hole, W Two Key Hole
7. Rotation Angle: 0°~90°, 0°~120°, 0°~180°, 3 Position, 0°~45°~90°
8. Ambient Temp.: Standard-8, Low Temp.: D, High Temp.: G
9. Corrosion Resistance Grade: A, B

Double Acting Operation

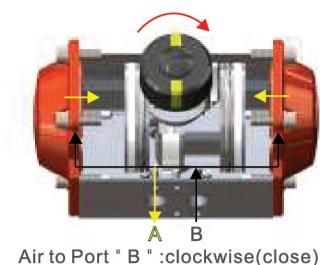

Selection of double acting actuators

The suggested safety factor for double acting actuators under normal working conditions is 20%-30%

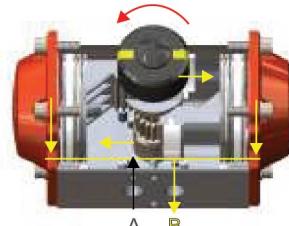

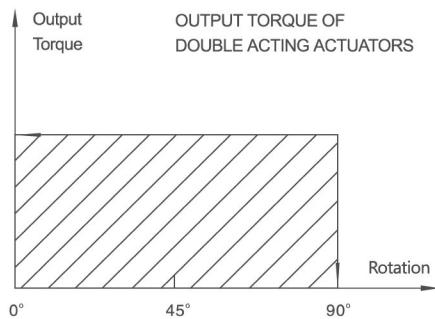

Example:

- The torque needed by valve=100 N.m
- The torque considered safety factor $100 \times (1+30\%) = 130$ N.m
- Air Supply= 5 Bar

According to double acting torque table, we can choose the minimum model is AV125DA.

Air to Port "B": clockwise(close)

Air to Port "A" :counterclockwise(open)

* Pistons must be inverted to reverse actuator rotation

Spring Return Operation Diagram

Selection of Spring Return Actuator

Suggested safety factor for spring return actuators under normal working condition is 30%-50%

For Example:

Required valve torque: 100N.m.

Safety Torque: $100 \times 1.3 = 130$ N.m.

According to output torque table of spring return actuator, model AV145SK10 can be selected

Torque is as following:

Air to Open 0°=324N.m.

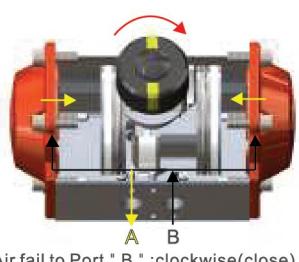

End to Open 90°=212N.m.

Spring to Close 0°=197N.m.

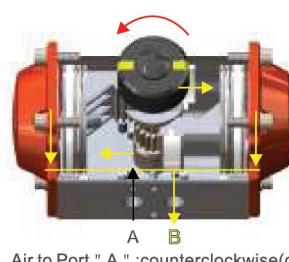

End to Close 90°=310N.m.

All output torque is larger than needed.

Note: Air supply through port B will not affect the output torque of actuator during spring return. On the contrary, it will help spring return.

Air fail to Port "B" :clockwise(close)

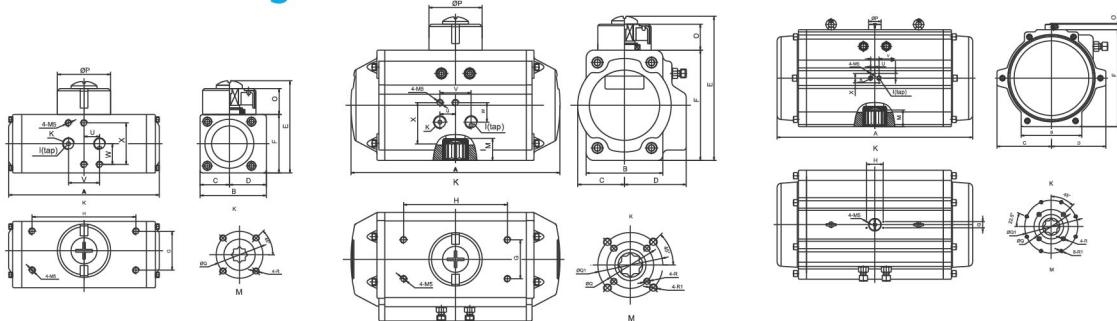

Air to Port "A" :counterclockwise(open)

- Spring force makes the actuator clockwise when the air is exhausted at port "A"
- When air fail to counterclockwise is required, the pistons must be inverted

Double Acting Actuator Output Torque(Nm)

MODEL: AV

Pneumatic Actuator

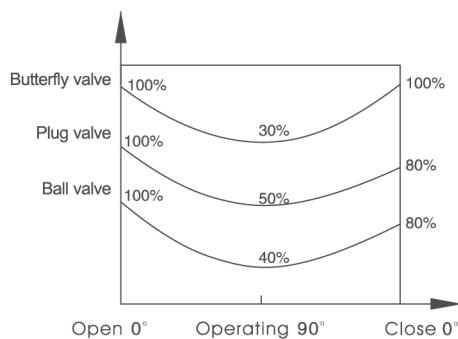

VOCESTER

USA

Single Acting Actuator Output Torque(Nm)

Sizing Information and How to Order

For Example:

Max. Butterfly Valve Torque: 80N.m.

Open Torque $80 \times 30\% = 24$ N.m.

Air Pressure: 6 bar

We can choose AV115SA

Air to Open $0^\circ = 159$ N.m. > 80N.m.

End to Open $90^\circ = 101$ N.m. > 24N.m.

Spring to Close $90^\circ = 157$ N.m. > 24N.m.

End to Close $0^\circ = 98$ N.m. > 80N.m.

Figures above show normal opening of butterfly valve can be satisfied.

Operating Type (Double Acting and Spring Return)

Air supply connection is designed in accordance with NAMUR standard to install solenoid valves.

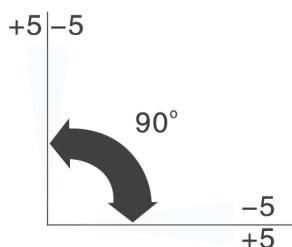

The Namur drive pinion and the Namur top mounting connection permit direct installation of accessories such as limitswitch box and positioner.

Bottom mounting connection is designed in accordance with ISO5211, DIN3337 standards for direct mounting with valve gear boxes or mounting brackets.

Operating Conditions:

1. Operating media

Dry or lubricated air, or the non-corrosive gases

The maximum particle diameter must less than $30\mu m$

2. Air supply pressure

The minmimum supply pressure is 2.5 Bar

The maximum supply pressure is 8 Bar

3. Operating temperature

Standard: $-20^\circ C \sim +80^\circ C$

Low temperature: $-35^\circ C \sim +80^\circ C$

High temperature: $-15^\circ C \sim +150^\circ C$

4. Travel adjustment

Have adjustment range of $\pm 5^\circ$ for the rotation at 0° and 90°

5. Application

Either indoor or outdoor

Air consumption is dependent on air supply pressure, open-close stroke, volume and motion times, which is calculated as following:
L/Min=Air Volume (Opening Volume+Closing Volume)*Air Supply Pressure (Kpa) +101.3/101.3 *Motion Times (Min.)

Common Faults, Inspection and Troubleshooting

Failure Phenomenon	Inspectron Items	Solution
Pneumatic valve can not move	1. When solenoid valve is normal, coil is burned or not, or whether solenoid valve core is blocked by foreign matter.	Replace solenoid valve and coils and remove foreign matter
	2. Test the pneumatic actuator separately with air supply, check whether sealing ring and cylinder is damaged.	Replace the damaged sealing ring and cylinder
	3. Impurities in the valve blocks the valve core.	Remove impurities and replace damaged parts
	4. The handle is in manual position.	Move the handle to pneumatic position
Slow motion, crawling	1. Air supply pressure is not enough.	Increase air supply pressure (0.4-0.7 Mpa)
	2. Output torque of pneumatic actuator is too small.	Choose a larger pneumatic actuator model
	3. Valve coil or other valve components are too tight.	Reassemble and readjustments
	4. Air supply pipe is plused and flow is too small.	Clear the plug and replace the filter
Reply devices without signal	1. Short circuit or disconnection of power occurs.	Inspect and repair power circuit
	2. Cam position inside the switch box is not accurate.	Adjust the cam to correct position
	3. Micro switches is damaged.	Replace micro switches

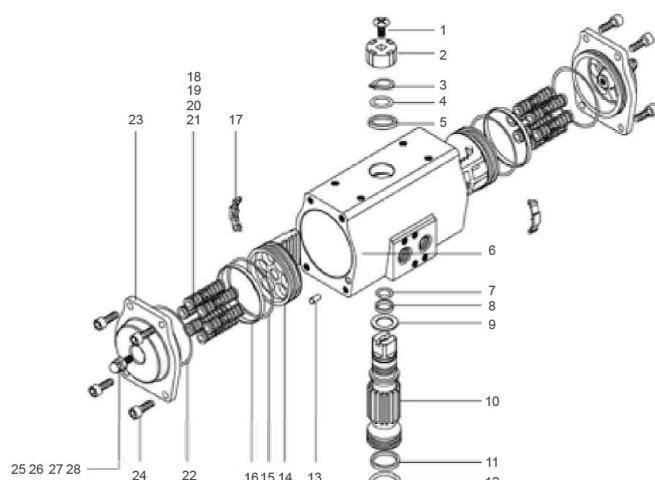

AV Stainless Steel Pneumatic Actuator

Features

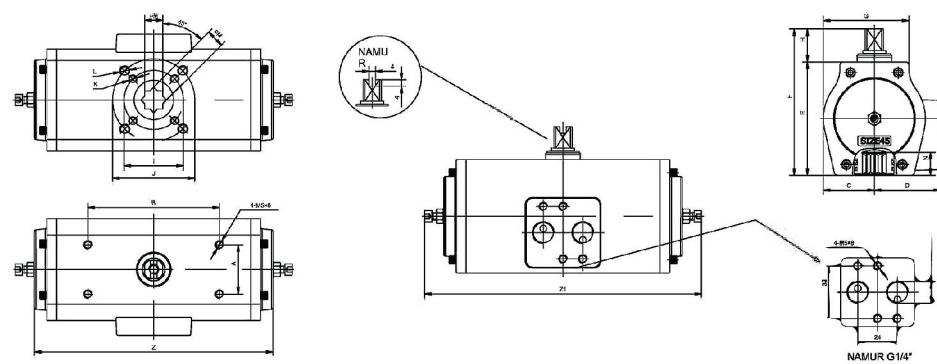

1. ASTM 316L, 316, 304, 303 stainless steel pneumatic actuator with electro-polish finish offer excellent resistance to most corrosive chemicals as well as industrial atmospheres.
2. Dual piston rack and pinion design for compact construction, symmetric mounting position, high-cycle life and fast operation, reverse rotation can be accomplished in the field by simply inverting the pistons.
3. Multiple bearings and guides on racks and pistons, low friction, high cycle life and prevent shaft blowout.
4. Modular preloaded spring cartridge design, with coated spring for simple versatile range, greater safety and corrosion resistance, longer cycle life.
5. Fully machined teeth on piston and pinion for accurate low backlash rack and pinion engagement, maximum efficiency
6. Stainless steel fasteners for long term corrosion resistance.
7. Full conformance to the latest specifications: ISO5211, DIN 3337 and Namur or product interchangeability and easy mounting of solenoids, limit switches and other accessories.

AVC 120°/180° Double Acting Actuator

120°/180° Actuator Dimension and Connection Size (Double Acting)

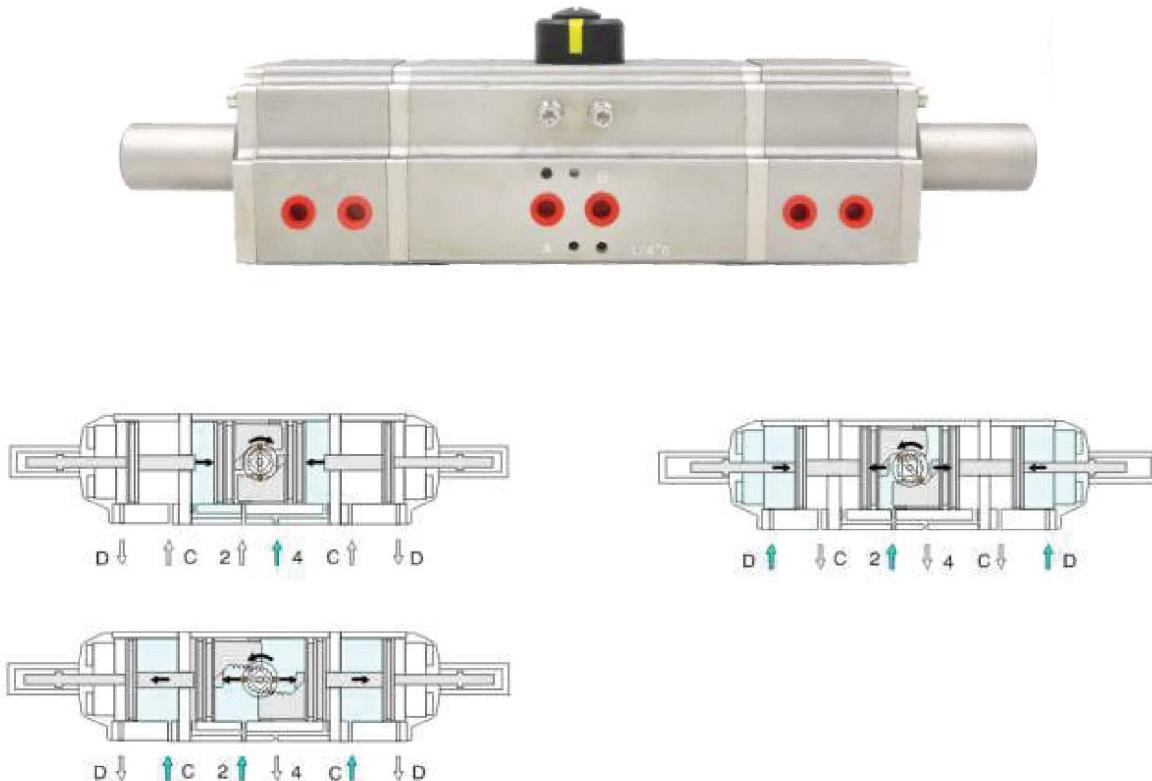

1. We can provide other item actuators according to your requirement
2. We can provide different stroke actuator, such as 40°/60° etc

Three Position Pneumatic Actuator

Three position pneumatic actuators have two kinds of models $0^\circ - 45^\circ - 90^\circ$ or $0^\circ - 90^\circ - 180^\circ$. In intake 2.the piston move to both ends after air inflow, it through both ends design has auxiliary piston produces mechanical constraints to realize the middle position it can use outside ends adjusting bolt easily adjust intermediate position angle directly such as 20° 30° 50° 75° or 95° 120° 130° 150° 175° , etc.

Three position pneumatic actuators which operating need to design a set of electromagnetic valve control loop system to complete the operation, the control principle is as follows:

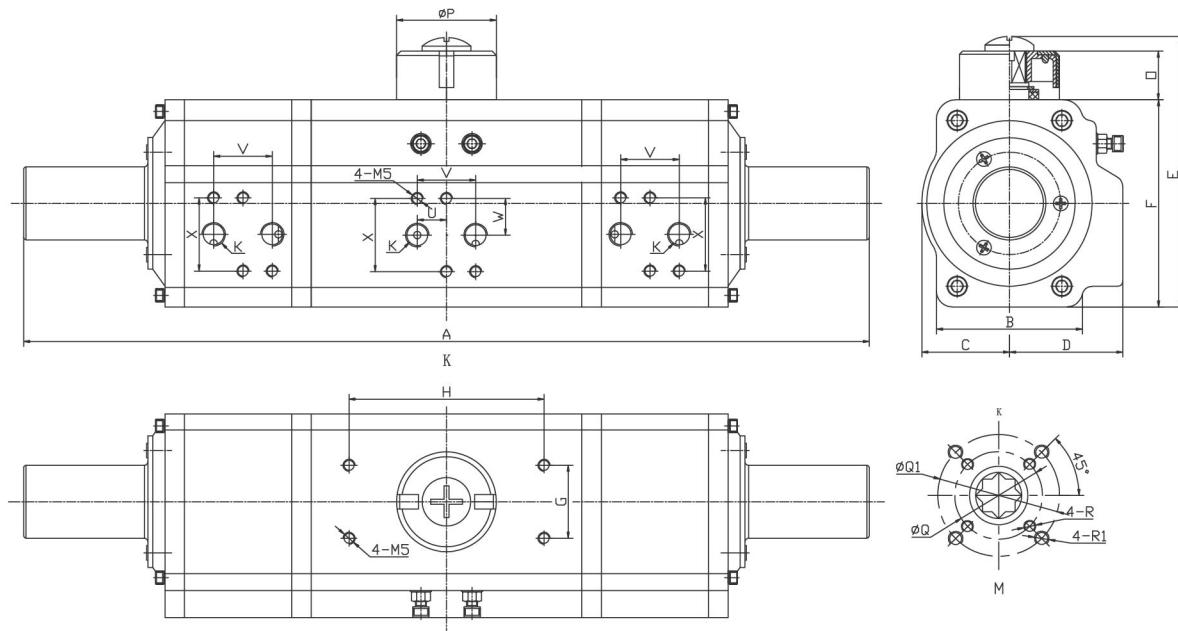

Air pressure enter 2 hole and D hole ate one time, then air from 4 hole and C hole eduction, 2 hole as internal piston movement, D hole through assisted piston push-rod limit internal piston positioning at a predetermined middle.

Air pressure enter 2 hole and C hole at one time, then air from 4 hole and D hole eduction, 2 hole internal piston continues to move, C hole remove auxiliary piston push-rod limit positioning, it make the internal piston smooth arrival in full-open position.

Air pressure into 4 hole, then air from 2 hole eduction, internal piston move to the middle direction then reach full-closed position.

We can provide 0-45-90 spring return type specification, When lose air, or cut power (or airfailure), it can return to full-closed position, through the spring force inner piston.

Three Position Pneumatic Actuator
